

# The Single-Seal Notification Solution

*for Jensen 450 and 480 Mixers*

# Leak Detection and Notification **Peace of Mind.**

## *Introducing the Jensen Sentry.™ Notification System.*

Achieve better compliance on new or existing Jensen 450 and 480 mixers with the system that detects and notifies you of leaks *before* they affect the environment.

**HOW IT WORKS.** The Sentry system consists of an externally-mounted lube pod that connects to the fluid-filled chamber surrounding the mixer's mechanical seal. In the event of a mechanical seal breach, the gravity-lubricated system detects and holds maximum tank head pressure safely and reliably until it can be attended to by a technician – thus preventing tank contents from leaking onto the ground. The system can be fitted with remote alert systems to speed up the notification process.

**CALL US TODAY.** Find out more about how a Jensen Sentry Notification System can work for you. 1-800-826-5646.

## ADVANTAGES

- Comes standard on all new Jensen 450 and 480 mixers OR can be retrofitted to existing units (retrofits are completed at our manufacturing facility)
- Environmentally-safe system
- Does not require a power source
- Compatible with third-party sensors and detection systems
- Low maintenance
- Engineered and developed by Jensen engineers to work with Jensen products
- 12 month limited warranty

**Gravity-Lubricated Positive Containment System.** Holds tank pressure to contain a mechanical seal leak.

**Visual Float Ball and Leak Detection Glass.** Multiple ways to detect a mechanical seal failure. System can also accept third-party detection sensors.
